AUTOMATED FILLING EQUIPMENT

The 55 gallon filler has features not seen anywhere in the industry. A new approach to design of the operator interface controls makes operation a breeze! A.S.R.P. makes it ingenious.

Automatic 55 Gallon Drum Filler released in February

PASE Group Inc. has just shipped their latest model 55 gallon drum filler. This filler will fill 15, 30, and 55 Gallon drums with minimal setup time.

This system utilizes two fill lances for sub-filling Hydrogen Peroxide and other types of cleaning agents. The system requires short setup times for the operator minimizing down-time and resulting in an increase in production.

Once in cycle the machine automatically aligns the bung, moves the container to the fill station, fills to a preset net weight and advances the container to the capping station.

This system is also equipped with the PASE Group's A.S.R.P. Package, thus providing real time statistics to production. This enables further cost savings and more accurate product control.

PASE Group brings new meaning to the word "economical"

Our customers needs are changing continuously to the pressures of today's economy and consumer demands. PASE Group Inc. understands this and is working hard to bring quality low cost solutions to the table. Recently the request was made for a low cost 5 gallon filler that would give accurate filling in a semi-automatic package, yet could be upgraded as the company grows.

PASE delivered with a semi-automatic filler that will fill both metal and plastic 5 gallon buckets. Simple, reliable, and very user friendly are the key factors that make this filler a winner. Upgrades include an additional fill head for two head operation, 1 gallon, quart, F-style container capabilities. A.S.R.P. system available as an upgrade on this model.

Who said you couldn't teach an old dog new tricks!

No one here at PASE Group did! We believe that just about anything is possible, and with this next example, we proved it! One of our principles wanted to utilize an existing volumetric machine and have it rebuilt. Well, after examining the machine, we found that after 25 years of service, it was well beyond the condition. This being the case, PASE Group proposed a solution. We resurrected all four of the pumps and other key components for product delivery, and came up with a cost effective solution. The results are seen here and the principle is very pleased with the results. So pleased in fact that a whole conveyor system with product handling management components were added to the project. PASE can provide everything from stand alone fillers up to complete product handling systems. Call us for specific applications you may have!

SERVICE Department Highlights

Service Manager **Gary Jones**
 Email: gjones@pasegroup.com
 Phone: 952-746-1091 Ext 157#

BIO: Gary has 12-plus years technical experience in the filling machines industry. His extensive knowledge and technical expertise is a key asset that PASE Group has over it's competitors. Gary came on board after spending 10 years at Neupak Inc. This being said, he can answer your questions you may have about supporting your Neupak equipment.

Call Gary for parts and service help with PASE Group equipment as well as other brands of machines in the field.
