PASE GROUP INC. DESIGNS & INTEGRATES A DUAL 6-HEAD (POP) NET WEIGHT FILLER, LID PLACER AND LABELER FOR PINTS, QUARTS & GALLONS

PASE Group Inc. innovation continues with the design and integration of a liquid filling line featuring a dual 6-head Pressure-Over-Product (POP) net weight filler. The filler was complimented with an infeed table, roll-through labeler, automatic high speed lid indexer, lid closer, and new Class 1, Division 1 explosion proof controls. Because PASE's customer required this system to fit into smaller than normal corner, the system was designed without the need for multiple carts and umbilical cords. According to PASE Group Inc. President, Tim Swedberg "The primary carts can be pushed back with one finger, heads powered down into the sealed, closed-loop flushing system, and automatically cleaned with the push of a button."

Switching between container sizes is a snap! The lid dropper and guide rails automatically adjust to the appropriate container. The lid indexer / dropper is capable of running as many as 2000 lids before reloading. During run off, the lightning fast in-line filler exceeded 70 containers per minute!! Call PASE Group Inc. today to learn how they can design a custom made filler to meet your needs.

PASE GROUP INC. SHIPS A TWIN SET OF 2-HEAD, MOBILE, SEMI-AUTOMATIC, NET WEIGHT FILLER/CLOSERS

Shown to the right is one of PASE Group Inc.'s most versatile semi-automatic net weight filling & closing systems. Extremely accurate filling and reliable sealing of metal or plastic quart, gallon and 5-gallon containers. One air drop and one single-phase power drop and you are ready to run your next batch!! In other words.....EASY! Call PASE Group Inc. today to see how this system can benefit your production needs.
