PASE Group, Inc. Automatic Lid Placing/Closing System For 1-5 Gallon Pails With Plastic Lids

PASE Group Inc. innovation continues with the manufacture of an automatic lid placing system to de-nest, place and seal 5-gallon plastic lids at a rate of 40+ containers per minute. This system automatically feeds stacks of lids into the denesting area. The lids are then picked from the top and placed onto a feeding zone to continuously feed individual lids to a placing shoot. The filled containers travel through the system and the lid is positioned on the container automatically without stopping or slowing the container. The container then travels through the system to the lid press assembly for sealing. A no-lid detection system is standard on this equipment, as well. This machine is designed to run a wide variety of container/lid sizes with no change parts required. The machine is also CE ready with all interlocked doors and guarding. Please contact PASE to learn more about this system and our other capabilities.

PASE Group, Inc. Expands Line of Automatic Pail Denesting Equipment Line

Due to the success of PASE Group Inc.'s 4-head pail denesting system, which denests 5-gallon plastic and metal pails at a rate of 22 pails per minute, PASE Group was asked to step-up and manufacture a system that would handle 40+

5-gallon (20 Liter) and 40+ 2.5 gallon (10 Liter) pails per minute. This was achieved by simply modifying our 4-head denester to a 6-head denester. Both of PASE Group's denesters have an incredibly small foot print, which allows for easy installation where plant space is a concern. These denesters send out containers single file with the handle oriented. **Please contact PASE Group, Inc. to learn more about our product offerings, which include: Filling, Lid Placing, Denesting and Complete Line Integration.**

PASE Group, Inc. Expands Its High-Capacity Lid Indexer, Dropper, Sealer To Run Non-Standard Over-Cap Lids And Containers

Our standard compression lid (pint/quart/gallon) high speed lid placing machines have expanded to the overseas market where the containers and lids are quite different. This newly developed system indexes, places and seals a size variety of **over-cap** lids at rate of 90+ containers per minute. Please contact PASE Group to discuss all of our lid placing solutions.
