PASE Group, Inc. Develops 8-Head (4x4), Automatic Quart/Gallon Filling/Lidding System With All New Push-Back Cleaning Design

PASE Group's new push-back cleaning/filling design is easy, smart, fast, very accurate. This system was equipped with (2) sets of scales, (2) 4-head, POP filling units, (2) on-board completely integrated, automatic closed-loop cleaning stations, and of course our 1000 lid Indexer, dropper, closer for the most

efficient automated, net weight inline filling system on the market today. PASE Group, Inc. continues to enhance and add the most desired features to large and/or small batch filling with a 5-minute product change over sequence that operators love and production managers must have. The graphical display continuously shows the operators exactly what the system is doing at all times. Automatic cleaning while filling proves to out perform higher-speed filling systems hands down. The electro-polished POP tank eliminates ALL product waste...All of the product is deposited in sellable containers. Please contact PASE Group, Inc. for more details.

PASE Group, Inc. Manufactures an All Stainless Steel 2 Head, Sub-Fill, Net Weight Pail Filling/Conveying System

This semi-automatic 2-head pail filling system was designed to fill the foamiest, most

aggressive products in the cleaning industry. This system was developed with (2) permanently connected filling carts with automatic cleaning of on cart while filling with the other. One of filling systems was equipped with all plastic contact parts, including the filling lances to last the test of time, where metallic components will fail. This system also included automatic plastic lid placing and sealing and automatic pour-spout crimping. A single operator can feed containers, fill, lid, seal, and palletize.

PASE Group, Inc. Ships another Net Weight Tote/Drum Filling System with all integrated conveyor system

PASE Group, Inc. designed, manufactured and shipped another of our standard net weight,

sub-fill drum, tote, pallet filling systems. This system came with all automated, advancing conveyor systems, sanitary filling lances, fume collection hood, fill weight tracking, and Ethernet port for filling data collection and export to plant PC.
