4 Head A-B Filler plays in the MUD!

PASE Group INC. has been very busy this year producing equipment. While maintaining delivery schedules for every thing from pint/gallon single head fillers to 6 head inline pushover fillers with a complete packaging lines, we have achieved some engineering firsts that are further setting us apart from our competition. One project we have had some fun with is the 4 Head A-B filler. The application shown in the picture is filling sheetrock compound into 5 gallon round pails and bag-n-box containers. This is a very thick material and is unique in it's properties. The

system will be fed with a screw pump and can deliver 18 to 20 CPM. During operation the system feeds both lanes with containers to keep the system full and the lanes balanced. Lane A fills 2 containers at a time while Lane B gets queued up. Once lane A is full the system automatically switches to lane B to fill the waiting containers. The system keeps filling at all times eliminating the need to wait for transfers and containers feeding into a fill zone. In addition to 5 gallon containers, this will also do gallons at a rate of 25 to 30 CPM depending on viscosities and product type. If you would like further information on how this system could work for you, call (952) 746-1091 for more information

2005 Highlights @ PASE

- 2 Stage fill heads double production output when used on our gravity 4 head fill system.
- PASE delivers on an entire 6 head net weight system integrating a capper, sealer, torquer, and case packer.
- Expansion of PASE Facility is necessary to accommodate projects and streamline production.
- 4 automatic lid droppers are installed on existing paint line.
- Drum and Tote Fillers are shipped along with complete filling line.

- A.S.R.P. Automated Statistics Reporting Package is your key to managing your production control. Call us for details on what this can do for you.
- Robotic palletizing coming soon on an upcoming system. We will keep you posted!
- Call Gary Jones, our customer support manager, with any parts or service issues on your existing filling machines. We can accommodate many types.

6 Head Filling Machine

PASE Group built an entire production line consisting of a 6 Head Filler, Case Packer, Capper and Torquer. In addition to these machines the same principle ordered a TOTE filling system and a Drum filling system. They are completing an entire new plant in Missouri and will be showcasing the PASE filling equipment as part of their production line. In addition, these machines will be running the A.S.R.P. system on the fillers.
