## 6 Head Pushover Machine Sets New Standards

The PASE group 6 head pressure over product filler is running on the production floor within one of our customers Ohio locations. With a capable throughput of 50 to 60 CPM with gallon containers, this machine is proving itself by enabling our customer to increase their production while at the same time making switchovers to other products a smooth process. This two tank system has a cart ready when product switches are made, thus reducing the effort down to selecting the filling cart on the HMI and placing it in the fill zone. Our exclusive Clean In Place (flushing) system makes clean and prep for the next product run a quick process with minimal waste. No more disconnecting and re-connecting to clean and switch your fillers.

## PASE Delivers Another Ag-Chem Filler!

One of our principles has ordered a second filler and conveyor system to keep up with steady orders in the Ag-Chemical business. This unit is a 4 head sub-fill with product tracking. Servo driven push over design insures fast fills and smooth reliable operation. This machine fills 2.5 Gallon F style containers and can be fitted for other container types also. The machine is designed to be upgraded to a 6 head at anytime.

## How are You Stacking UP?

You know, if there wasn't the proverbial water cooler, you would think the lid dropper would be the next in line for that employee gossip spot!. PASE Group has a solution to having your operators constantly standing around the lid dropper. Our lid feeder can hold thousands of lids at one time, feed them to our lid dropper, and keep the stack in the drop zone full at all times.

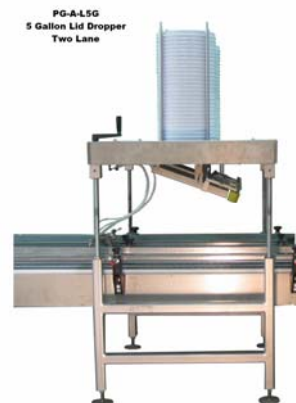

The operator loads the stacks until it is full, and occasionally inserts additional lid stacks to keep this hungry lid feeders thirst for high production quenched! We can configure the footprint of this unit to make it as long as possible to maximize the amount of lids that can be queued up at one time. Your operators may have to find a new "water cooler".

## 5 Gallon Lid Dropper Available From PASE Group!

PASE Group is introducing our 5 Gallon lid dropper for plastic lids. This unit comes standard with our total solution line packages, or can be added to your existing line to enable your operators to focus on more important tasks. The unit shown below is a twin lane dropper servicing two lanes at once in a class 1 Div 1 environment. It is of a simple design which makes for long life and minimal service or spare parts. Oh, we should point out that this is a very in-expensive solution to placing 5 gallon lids.
