## PASE SHIPS POP (Pressure Over Product) FILLER WITH HIGH CAPACITY LID INDEXING SYSTEM!

PASE Group has combined two original designs in one line which makes this more than adequate for the application. One of our principles has dramatically improved their production by installing this 4 head pushover net weight filler that will fly along at a comfortable 45 cpm for gallons and 48 cpm for quarts. This system includes PASE built pump carts to feed the hungry POP fillers and a rotary infeed table to keep the line full. The HMI features our operator friendly layout and design, which has been highly praised in the industry. Your technicians will have all the troubleshooting features needed to analyze the system and keep the line running at peak production. PASE Group's high capacity lid feeding system keeps 1200+ lids on tap at one time. Once the standard capacity lid holder is filled the system will run enough lids during the batch run to permit the operator to attend to the important aspects of production. This lid feeder will work with both plastic and metal lids. Check our website to see more on all this equipment.

## PASE IS READY TO SHIP NEW PAIL DE-NESTER.

PASE innovation and engineering excellence continues with the introduction of our new 5 gallon pail de-nester. Designed to take up a minimal footprint this machine will take less space on your production floor. High throughput is achieved by de-nesting four (4) containers at a time. Continual operation by utilizing an infeed accumulation conveyor for queuing up multiple stacks of containers. Easy to use controls make this easy to operate. Designed for long life and heavy duty operation. This machine will bring a quick ROI while automating the task of de-nesting your containers. Call PASE for further details and quoting.

## INTRINSIC LID CRIMPER AND PRESS

PASE group has available this unit that can crimp and press both metal and plastic lids. The machine is designed to run in a Class 1 Div 1 environment. The simple yet strong design make this easy to operate, and will run for years of trouble free service. The machine in the picture below has the U-Turn conveyor installed which enables the operator to palletize the containers once they are finished. More details available on our website.
