PASE SHIPS TWO MORE HIGH CAPACITY LID DROPPERS WITH INDEXING FEED CONVEYOR

PASE Group innovation continues with the manufacture of our largest capacity lid dropper to date. The unit shown below left was designed per our customer request for an angled lid feed conveyor from the main line to accommodate the floor layout. No problem, we can run the lid feed conveyor from inline with the can conveyor to 90 degrees from the can conveyor. No other company can offer almost limitless lid storage for continuous running at high speeds like PASE Group Inc. Loading the lids

into the handling conveyor can be done without interrupting production. The operator places stacks into the load zone and the machine does the rest. Lid capacity is no longer an issue when you can load more than 2000 plus lids at a time. This could mean you may not run out for an entire production batch. The machine is adjustable to run gallon and quart lids with minimal changeover time. Contact PASE Group sales to find out more.

PASE CONTINUES TO EXPAND OVERSEAS

Historically, the economy of Barbados had been dependent on sugarcane cultivation and related activities, but in recent years it has diversified into the manufacturing and tourism sectors. PASE Group has responded by supplying one of it's manufacturers with two filling machines to meet their ever increasing production needs. Top is our semi automatic two head filler running 6gallon, 1 gallon, and quart plastics with lid press. Bottom is our fully automatic 2 head filler with rotary infeed table and lid press.

PASE GROUP AT PACK EXPO LAS VEGAS

Don't forget to stop by and see us at booth # 3643 in the central building of the convention center. We will be displaying the lid droppers featured in this news letter. Along with this we will have full visual displays running with all of our current product information. This is an opportunity to receive first hand information on our company and it's products. We are always interested in discussing you needs and how we can help your company become more productive.
